

1 Calcule.

$$\frac{3}{2} + \frac{6}{2} + \frac{5}{2} = \frac{\cdot}{\cdot}$$

$$\frac{12}{30} + \frac{5}{30} + \frac{23}{30} = \frac{\cdot}{\cdot}$$

$$\frac{1}{5} + \frac{3}{5} + \frac{2}{5} = \frac{\cdot}{\cdot}$$

$$\frac{6}{54} + \frac{3}{54} + \frac{7}{54} + \frac{2}{54} = \frac{\cdot}{\cdot}$$

$$\frac{5}{13} + \frac{1}{13} + \frac{2}{13} = \frac{\cdot}{\cdot}$$

2 Calcule comme dans l'exemple.

$$\frac{8}{9} + \frac{24}{9} = \frac{\cdot}{\cdot} = \cdot + \frac{\cdot}{\cdot}$$

$$\frac{4}{6} + \frac{5}{6} = \frac{9}{6} = 1 + \frac{3}{6}$$

$$\frac{6}{15} + \frac{3}{15} + \frac{7}{15} + \frac{2}{15} = \frac{\cdot}{\cdot} = \cdot + \frac{\cdot}{\cdot}$$

$$\frac{23}{16} + \frac{12}{16} = \frac{\cdot}{\cdot} = \cdot + \frac{\cdot}{\cdot}$$

3 Mets ces fractions sous le même dénominateur et calcule.

$$\frac{5}{10} + \frac{3}{100} = \frac{\cdot}{\cdot} + \frac{\cdot}{\cdot} = \frac{\cdot}{\cdot}$$

$$\frac{4}{10} + \frac{2}{100} = \frac{40}{100} + \frac{2}{100} = \frac{42}{100}$$

$$\frac{3}{10} + \frac{2}{100} + \frac{7}{100} = \frac{\cdot}{\cdot} + \frac{\cdot}{\cdot} + \frac{\cdot}{\cdot} = \frac{\cdot}{\cdot}$$

$$\frac{7}{1000} + \frac{3}{100} = \frac{\cdot}{\cdot} + \frac{\cdot}{\cdot} = \frac{\cdot}{\cdot}$$
